	Totals:		
		\$0.0000	\$0.0544

Initial offer date -
8/16/13

Information updated as of 11/19/13

An investor can lose money by investing in this Trust. The Trust is not actively managed and will not sell securities in response to ordinary market fluctuations. An investment in this unit investment trust is subject to market risk, which is the possibility that the market values of securities owned by the Trust will decline and that the value of Trust units that you receive in connection with the Trust's termination or a redemption of your units may therefore be less than what you paid for them. There is no guarantee that the Trust will meet its investment objectives, that the securities comprising the portfolio will pay dividends or that the unit price will not decline. Price fluctuations of particular securities will change the portfolio's composition throughout the life of the Trust. When cash or a letter of credit is deposited with instructions to purchase securities in order to create additional units, an increase in the price of a particular security between the time of deposit and the time that securities are purchased will cause the units to be comprised of less of that security and more of the remaining securities. In addition, brokerage fees incurred in purchasing the securities will be an expense of the Trust and such fees will dilute the existing unit holders' interests.

An investment in a portfolio containing small-cap companies is subject to additional risks, as the share prices of small-cap companies are often more volatile than those of larger companies due to several factors, including limited trading volumes, products, financial resources, management inexperience and less publicly available information.

The risk that the financial condition of the issuers of the common stocks in the Trust and comprising the portfolios of the Funds may become impaired or that the general condition of the stock market may worsen (both of which may contribute directly to a decrease in the value of the securities and thus in the value of the units).

An investment in a portfolio containing securities of foreign issuers is subject to additional risks, including currency fluctuations, political risks, withholding, the lack of adequate financial information, and exchange control restrictions impacting foreign issuers. Risks associated with investing in foreign securities maybe more pronounced in emerging markets where the securities markets are substantially smaller, less liquid, less regulated and more volatile than the U.S. and developed foreign markets. Closed-end funds are subject to various risks, including management's ability to meet the fund's investment objective, and to manage the fund's portfolio when the underlying securities are redeemed or sold, during periods of market turmoil and as investors' perceptions regarding the funds or their underlying investments change. Unlike open-end funds, which trade at prices based on a current determination of the fund's net asset value, Funds frequently trade at a discount to their net asset value in the secondary market. Certain Funds may employ the use of leverage which increases the volatility of such Funds. You will bear not only your share of the Trust's expenses, but also those of the underlying Funds. By investing in Other Funds, the trust incurs greater expenses than you would incur if you invested directly in the Funds.

The call writing portion of the investment strategy of the closed-end funds may not be successful in that the closed-end funds may not realize the full appreciation of stocks on which the closed-end funds have written call options. The ability to successfully implement a closed-end fund's investment strategy depends on a closed-end fund's adviser's ability to predict pertinent market movements, which cannot be assured. The value of a call option may be adversely affected if the market for the option becomes less liquid or smaller. The value of an option will be affected by changes in the value and dividend rates of the stock subject to the option, an increase in interest rates, a change in the actual and perceived volatility of the stock market and the common stock, and the remaining time to expiration. Certain Funds may utilize substantial leveraging in their portfolios. This leveraging will cause increased price volatility for those Funds' shares, and as a result, increased price volatility for the price of the units of the Trust. Certain Funds in the Trust portfolio may invest in securities that are rated below investment-grade and are considered to be "junk" securities. While these lower rated securities offer a higher return potential than higher rated securities, they also involve greater price volatility and greater risk of loss of income and principal and may be more sensitive to interest rate changes and more likely to receive early returns of principal. Certain Funds in the Trust may invest in securities that are rated as investment-grade by only one rating agency. As a result, such split-rated securities may have more speculative characteristics and be subject to a greater risk of default than securities rated as investment-grade by both Moody's and Standard & Poor's. There is no assurance that any dividends will be declared or paid in the future on the securities.

The sponsor may offer successive Trusts with similar portfolios thereby allowing the investor to pursue the same strategy over a number of years. Investors should consider their ability to pursue investing in successive Trusts, if available. There may be tax consequences associated with investing in the Trust and rolling over an investment from one Trust to the next.

Investors should consider the Trust's investment objective, risks, charges and expenses carefully before investing. The prospectus contains this and other information relevant to an investment in the Trust. Please advise your clients to read the prospectus carefully before they invest.
